

David Winstrom

Right, the author with his 60 mm Unitron, c. 1955; and above, in 2019, with wife, Fran, and 28 inch f/3.6 Star Structure at the Golden State Star Party, Adin, California.

Ed Mannery

Interested in astronomy? Take a reader's journey to discover the odd, the unusual, and the just plain strange. Fifty-nine sign-post topics address wide-ranging subjects.

Here's a sample:

- The ancients' attempts to interpret the night sky
- Superluminal speed
- The green flash enigma (now you see it, now you don't)
- Chaos on the surface of Europa
- The fate of the Sun
- Deflecting objects on a collision course with Earth
- The solar system's highest cliff
- How to measure the speed of light by popping marshmallows into your microwave

Interspersed along the way are discussions of the science underpinning our solar system and beyond.
